# Powerful Process Intelligence

Oden empowers manufacturers to eliminate waste, increase output, and gain the competitive advantage using their process data to proactively solve production issues.

Intelligent production insights for everyone

The most effective way to increase revenue and output is through process improvement. We enable engineers, plant managers, operators, and executives to optimize production with smarter process insights. Oden is the missing Industry 4.0 platform that provides your team with the right process metrics to make increase efficiency.

Accelerate process improvements 10x faster

Performing root-cause analysis and finding the source of process variation can take hours, if not days. With our platform, you can pinpoint the cause of production constraints in minutes, and improve your bottom line by eliminating scrap, unplanned downtime, and lost capacity.

About Oden

Founded: 2014

Headquarters: New York

Clients: Fortune 500 & small and mid–size manufacturers

Industries

Plastics
Building Products
Wire & Cable
Electronics
Packaging
Automotive
Metal Forming

Press

> Oden's analytics platform is now our primary tool for the production aspect of our company. It shows us what process we need to better control, and gives us an instant view into the impact of the process changes we make.

Make things. Better.

How we do it

Oden provides a complete, full-service solution for data acquisition, storage, and analysis. We install the data collection devices, securely store your data, and provide access and training on our web-based analytics platform, so you achieve a faster ROI.

(1) **Machine integration.** Our hardware devices seamlessly connect to your existing machinery. We can adapt to thousands of industrial controllers, sensors, PLCs, analog equipment to collect and aggregate valuable process data. We will digitize your factory in days, no new machines required.

(2) **Cloud processing and storage.** Oden securely transmits, stores, and processes unlimited data on the cloud. You maintain ownership of your data without the hassle of costly data historians or lengthy in-house projects. Our cloud architecture enables you to query billions of data points in seconds, compare runs over time, and integrate your ERP, MES, and QA data with Oden.

(3) **Analytics software.** Our analytics suite includes real-time factory floor metrics, historical product run analysis, accurate OEE calculations, and product quality reports so your team can proactively improve production operations quickly and easily, and stop fighting fires.

By the numbers

90%
improvement in time to resolution

70%
increase in engineer productivity

50%
decrease in total defect rates & scrap

20%
increase in monthly output
